Welcome to MD-SAL

Introduction
The Model-Driven Service Adaptation Layer (MD-SAL) is message-bus inspired extensible middleware component that provides messaging and data storage functionality based on data and interface models defined by application developers (i.e. user-defined models).

The MD-SAL:
- Defines a common-layer, concepts, data model building blocks and messaging patterns and provides infrastructure / framework for applications and inter-application communication.
- Provide common support for user-defined transport and payload formats, including payload serialization and adaptation (e.g. binary, XML or JSON).

The MD-SAL uses YANG as the modeling language for both interface and data definitions, and provides a messaging and data-centric runtime for such services based on YANG modeling.

The MD-SAL provides two different API types (flavours):
- **MD-SAL Binding**: MD-SAL APIs which extensively uses APIs and classes generated from YANG models, which provides compile-time safety.
- **MD-SAL DOM**: (Document Object Model) APIs which uses DOM-like representation of data, which makes them more powerful, but provides less compile-time safety.

Documentation
- Please head over to our official documentation of MD-SAL.

Release Plans
- Oxygen Release Plan
- Carbon Release Plan
- Boron Release Plan

Release Notes
- Boron Release Notes
- Beryllium Release Notes

Project Facts

**Project Creation Date**: April 17, 2014

**Lifecycle State**: Incubation

**Type**: Kernel

**Primary Contact**: Robert Varga <robert.varga@pantheon.tech>

**Project Lead**: Robert Varga <robert.varga@pantheon.tech>

**Committers**:
- **Active**:
  - Tom Pantelis <tompantelis@gmail.com>
  - Robert Varga <rovarga@cisco.com>
- **Inactive**:
  - Tony Tkacik <tony.tkacik@gmail.com>
  - Martin Ciglan <mciglan@cisco.com>

**IRC**: freenode.net #opendaylight

**Mailing List**: mdsal-dev@lists.opendaylight.org
  **Archives**: mailing list archives

**Meetings**: (pending)

**Repository**: git clone https://git.opendaylight.org/gerrit/mdsal

**Jenkins**: jenkins silo

**Gerrit Patches**: code patches/reviews

**Bugs**: open bugs
