Welcome to ServiceUtils

Introduction

ServiceUtils is an infrastructure project for OpenDaylight aimed at providing utilities that will assist in Operation and Maintenance of different services provided by OpenDaylight. A service is a functionality provided by the ODL controller as seen by the operator. These services can be categorized as Networking services, e.g. L2, L3/VPN, NAT etc., and Infra services, e.g. Openflow. These services are provided by different ODL projects like Netvirt, Genius and Openflowplugin and are comprised of a set of java karaf bundles and associated MD-SAL datastores.

Project Facts

Project Creation Date: **June 14, 2018**

Primary Contact: **Faseela K**

Project Lead: **Faseela K**

Committers:
- **Faseela K**
- **Hema Gopalakrishnan**
- **Michael Vorburger**
- **Vishal Thapar**
- **Sam Hague**
- **Vivek Srivastava**
- **David Suarez Fuentes**
