

2020-04-29 Integration Meeting Minutes

Date & Time

April, 29, 2020; 9pm PST

Agenda

- Release
- Infra
- Docs
- Misc

Minutes

Release:

- Magnesium seems to be on track and it's time to lock the branch since there are no blocker bugs
 - there is one [blocker bug](#) for magnesium release, but it's not in a managed project so we don't need to wait for it.
 - after the branch is blocked and any final merge jobs have had time to finish, we can pick up the NEXT successful autorelease to try to make it a release candidate
- Aluminium is delayed by at least two weeks while MRI versions are being delivered and upgraded
 - some projects still working on this (e.g., [genius](#))
 - need to merge this [int/dist patch](#)

Infra:

- tons of [open patches](#) to move projects to use sonarcloud
- we have a granular status page for ODL services (e.g., jira, jenkins, etc) on <https://status.linuxfoundation.org/>

Docs:

Misc:

- we noticed that the release version options on our ODL readthedocs doc page was missing this past week or so. That seems to have been resolved now.
