

# Project Pages Migration to Confluence from MediaWiki

OpenDaylight TSC has discussed making the default wiki for the OpenDaylight Project to [OpenDaylight](#) Confluence page from [ODL Mediawiki](#) during the TSC meetings of January 9 and January 30, 2020. The general consensus was to migrate keeping the old wiki for historical reference.

- [Abhijit Kumbhare](#) has created empty project pages for all the projects at [Confluence ODL Projects Home Page](#).
  - For a successful migration, projects should copy the content to their project page under [Confluence ODL Projects Home Page](#). At the minimum, projects should ensure that their project's Confluence has a link to their old media wiki project page.
    - This has been already done for all the active projects.
      - Example: <https://wiki.lfnetworking.org/display/ODL/Genius> has a pointer to the <https://wiki.opendaylight.org/view/Genius:Main>.
    - If the mediawiki URL is changed in the future (i.e. in case we point [wiki.opendaylight.org](https://wiki.opendaylight.org) to [OpenDaylight](#) Confluence page), projects will need to update the link from the Confluence page
      - Example: <https://wiki.lfnetworking.org/display/ODL/Genius> may need to update the link for the historical wiki from <https://wiki.opendaylight.org/view/Genius:Main> to say <https://oldwiki.opendaylight.org/view/Genius:Main>.

The current vote is for the TSC to approve the migration in the manner suggested above.

**Please note we will not be removing the current project pages at the current wiki (mediawiki) - those will remain for a historical reference.**
