

# ODL transportPCE Magnesium Retrospective

## Date

24 Jun 2020

## Attendees

- [Guillaume Lambert](#)

## Overview

This retrospective will present a quick overview of TransportPCE new functionalities introduced in Magnesium. It will be followed by a status on the developments done and some feedbacks on the features introduced by OpenROADM and the community ( OpenROADM 6.1 and 7.0 specs, SpotBugs / checkstyle enforcement and doppelgangers, netconf notifications multiple sessions....). A Q&A session is planned (feel free to send the topic leader some points you'd like to highlight so that they can be prepared on the support)
