Introduction

Move the Guice dependencies from infra-utils into a separate project to enable consumption in the rest of ODL.

What is the main goal?

- Repository to hold all artifacts required to support Google Guice as a DI - https://github.com/google/guice
- Add mycilla extension dependencies to this project.
- ODL Micro Project - ODL Micro Project will depend on this project

This is required to be a **managed project**.

Project Proposal - ODL Guice Project

Project Approval - ODL Guice Project Approval

Getting Started for Developers

Requirements

The following items will need to be delivered as a minimum by this project.

- Move inject-guice to this project - https://github.com/opendaylight/infrautils/tree/master/inject/inject-guice
- Add the Mycilla dependencies for Guice into this project - https://git.opendaylight.org/gerrit/c/infrautils/+/86037
- There are some other usages of Guice in caches, tests that will still not be removed

These initial items are covered in EPIC - **ODLGUICE-1** - Getting issue details... STATUS

Release Planning
