Project Name

OVSDB Integration

Features

OVSDB Major Features Include

- Implements [\[RFC 7047\]](#) Open vSwitch (OVS) Database Protocol (OVSDb)
- Allows for the configuration of any Open vSwitch software schema implementation.
- OVSDb uses JSON [RFC4627](#) for the schema and wire protocol presentation.
- Supports up to the latest experimental OVS version 2.0.9 and is fully backwards compatible with all older version including schema support.
- The OVSDb configuration manager residing in OpenDaylight can be used as a listener that waits for an OVS element to attach to it and then be configured once the JSON/RPC channel is negotiated.
- The OVSDb configuration manager can also be configured as an initiator to attach to OVS elements and remotely configure them in that direction.
- Create, modify, delete ports and all the various attributes of a port.
- Create, modify, delete encapsulated tunnels supporting CAPWAP, GRE and VXLAN framing.
- OVSDb can remotely setup the OpenFlow controller target and any details in handle the management plane functions supporting the control and data planes.
- OVSDb Library using Bidirectional JSON-RPC implementation
- OVSDb OpenVswitch plugin to support OpenVSwitch OVSDb Schema
- REST APIs for OVSDb Server Table Management (CRUD)
- Support for OpenStack Neutron ML2 Plugin using the OpenDaylight Mechanism Driver
- Integration with Openflow1.0 and Openflow1.3 plugins.
- Both per flow and per bridge tunnel keying
- API Support for all combinations of OVSDb transactions.
- Full support for the AD-SAL

Non-Code Aspects (user docs, examples, tutorials, articles)

- [OVSDb Installation Guide](#)
- [OVSDb User Guide](#)
- [OVSDb Developer Guide](#)
- [OpenDaylight-OVSDb Youtube Channel](#)
- [Postman scripts](#)
- [DevStack local.conf files](#)
- [Tutorial: OVSDb OpenFlow v1.3 Neutron ML2 Integration](#)

Architectural Issues

- Due to the NODE-TYPE issues between MD-SAL & AD-SAL, OVSDb Neutron cannot use MD-SAL for Openflow1.0 (even with AD-SAL Adapters).
- Clustering service not available when using MD-SAL based NSF bundles like Forwarding Rules Manager.

Security Considerations

Quality Assurance (test coverage, etc)

- [Functional test support for bridge, port, and tunnel creation](#)

End-of-life (API/Features EOled in Release)

N/A

Bugzilla (summary of bug situation)

- [Open bugs](#)

Standards (summary of standard compliance)

- [The Open vSwitch Database Management Protocol](#)

Schedule (initial schedule and changes over the release cycle)

The project roughly followed its release plan but failed on the code-freeze deadline due to the OpenFlow1.3 integration issues. But finally delivered on all of the set goals & features.
