- [Release Notes](#)

Introduction

Run a typical OpenDaylight SDN component such as NETCONF or OpenFlowPlugin without requiring the Apache Karaf OSGi runtime container.

What is the main goal?

- Simplifying the ODL deployment
- Reducing the time it takes to develop and debug ODL features
- Reducing the runtime memory footprint
- Reduce the start up time

The project takes forward work done previously under the "Simplifying ODL" led by [Unknown User \(voburger\)](#).

For more information see these presentations:

- [2018.09 at the ODL DDF during ONS Europe in Amsterdam](#) presented by Michael Voburger.
- [Micro-distributions based on ODL-Simple](#) presented by Tejas Nevrekar
- [Past Meetings in ODL](#) led by Michael Voburger

This is required to be a **self-managed project**.
