

# Contributing to Wiki

## DeveloperWiki and ReadTheDocs Usage Policy

**DEVELOPER WIKI:** for ODL release, project, subcommittee, and development related content, e.g.

- project management (meetings, plans, milestones, members, ...)
- project-specific development guides
- ongoing activities and discussions
- ODL community event documentation

**READ THE DOCS:** for all formal ODL E2E and component documentation, e.g.

- ODL overview, architecture, API
- ODL developer guides (e.g. Documentation guide)
- ODL user guides (E2E)
- ODL component guides, release notes
- ODL administration/operations guides
- ODL use-case description and usage
- ODL tutorials
- ODL release notes

For details on how to contribute to the formal ODL documentation, refer to the [ODL Documentation Guide](#).

## How to create content in the DeveloperWiki

### Guidelines / Best Practices

- Please follow the DeveloperWiki and ReadTheDocs Usage Policy given above.
- Pick good page title names representative of page content, unique across wiki space, and that won't change in the title but could be moved around in the page tree hierarchy.
- Avoid changing page titles, but if you expect changes will be needed, use the tiny URL link when referencing in email, external to wiki space site references, etc.
- Avoid splitting up page content once it has been published and comments/references exist. Context assumptions are subtle and easily broken.
- Consider using page tree hierarchy and/ or label query macros to organized multiples pages are expected to be added under a higher-level page rather than maintaining a list of references in the higher-level page content.
- Embedded images sometimes will pixelate - reedit the size by a couple of pixels on a 2nd save and they should be fixed.
- Notice that any 2nd level pages will appear in the landing page - if you place any new page at level 3 or below - it will keep the landing page concise.
- Recording your screen: OSX will record your screen if you have the QuickTime Player installed.
