Minutes

- Manoj Chokka has the Docker files to kickoff the repository. These will be uploaded as a draft to the int/pack repo. New folder needs to be created (ex: odl-docker).
- Anil Belurwill create verify|merge jobs to build/push docker containers onto Nexus3.
- This uses the basic Netconf config to bring up the controller. We need something that generates the xml config would help to bring up the components for ODL.
- relng/builder repo with have the scripts that can be used for ref for the docker file. (builder/jjb/integration/common-functions.sh)
  - https://github.com/opendaylight/releng-builder/blob/master/jjb/integration/common-functions.sh
- Can we leverage the dockerfiles from ONAP to bring up the controller?
  - https://github.com/onap/ccsdk-distribution/blob/master/opendaylight/aluminum/aluminum-alpine/src/main/docker/Dockerfile
